Eurol EGR Cleaner spray

For cleaning the exhaust gas recirculation (EGR) valve

Description

Eurol EGR Cleaner has been developed for removing excess carbon deposits from the inside of EGR valves.

EGR valves are installed in vehicles to reduce NOx emissions. Whether electronic or mechanical, EGR valves open and close to control the gas flow, dependant on e.g. throttle and engine temperature.

If the EGR valve is left open, the excess vacuum in the inlet will cause the engine to act like it wants to stall or idling roughly.

If the EGR valve is stuck in the closed position, the engine will have excessive NOx-emissions. Furthermore, a lot of vehicles may automatically reduce power if the electronically controlled EGR-valve does not function or respond.

Eurol EGR Cleaner can be used for cleaning your vehicle's EGR valve to smooth a rough idle or hesitant acceleration and to reduce knocking. Your vehicle will drive better

after using Eurol EGR Cleaner. Eurol EGR Cleaner is also recommended if your vehicle is billowing smoke. Eurol EGR Cleaner can be used without disassembly or a workshop.

The 400ml bottle of Eurol EGR Cleaner is recommended for use every 20.000km (12.500 miles) on mildly clogged inlets. You can use it on a low mileage vehicle every year to keep it clean.

Users should consult the Material Safety Data Sheet of Eurol EGR Cleaner for information about storage and shelf life. Please ask Eurol Research & Development if any further information is required.

Physical properties

Colour	Colourless
Flash point	-20 °C
	ASTM D 93

E701120

Version 1.0, 16-02-2016

This sheet contains recommendations or suggestions on properties and possible applications of Eurol products. Because of continuous product research and development, the information in this document can be changed at all times, without foregoing notice. The analytical information in this document consists of typical incorrectness of the text. The reader is advised to make the final product choice in dialogue with the supplier.
